

7. HPMS for Windows incorporates functions that other applications do not have as standard features. Specifically:

- The Donation module: tracks all monies made in memoriam of a deceased or for specific "giving campaigns" that the hospice uses for fund raising.
- HPMS has a multifaceted "Mail Module" that can generate either labels from data bases or export this information to Word and run letters from the data base.
- Bereavement: the tracking system that automatically generates 30, 60, 90, 120... letters to the next-of-kin. This is a very useful tool in automating the process of keeping in touch with the bereaved.
- HPMS also tracks your volunteer hours for the Volunteer Cost Saving Report that is required annually.
- HPMS prints data for the Medicare S-1 worksheet that is also an annual requirement.
- HPMS comes with over 600 built-in reports.
- We have a full function scheduler that can be used by everyone for patient visits or administrative time keeping as well.
- Our employee time sheets track direct and in-direct patient time as well as mileage and reimbursement.
- We have some of the largest for-profit hospices using HPMS.

8. HPMS is the only software to have a complete bi-directional HL-7 interface to pharmacies most often used by hospice care providers. The reductions in pharmaceutical cost alone can off-set a substantial part of the software and hardware expense.

9. In addition to our support staff, we offer technical expertise for designing LAN's, WAN's, network analysis for remote connectivity, hardware specifications and design and just about anything a client needs in the way of running their specific network.

We hope that the above information will be helpful in your evaluation. We welcome the opportunity to further discuss how HPMS can benefit your hospice by meeting your needs now and into the future.
